Sistemas de Control de los Alimentos

Objetivos:

1. Proteger la salud pública reduciendo el riesgo de enfermedades transmitidas por los alimentos
2. Proteger a los consumidores de alimentos insalubres, malsanos, indebidamente etiquetados o adulterados
3. Contribuir al desarrollo económico manteniendo la confianza de los consumidores en el sistema alimentario y estableciendo una base normativa sólida para el comercio nacional e internacional de alimentos

FAO/OMS

Razon de la demora de fsma es por lo receptivos de comentarios de la industria
Un condición imprescindible para alcanzar esos objetivos es la cooperación y
participación activa de todas las partes interesadas implicadas en la cadena alimentaria,
“de la granja a la mesa”

No obstante, en muchos países, los sistemas nacionales de control de los alimentos no pueden garantizar un suministro adecuado de alimentos inocuos para los consumidores nacionales ni cumplir los requisitos sanitarios y fitosanitarios internacionales para la exportación de alimentos. El fortalecimiento de la capacidad se promueve en respuesta a esas preocupaciones. Debe desempeñar además un papel decisivo en el establecimiento de un sistema moderno de control de los alimentos, basado en la ciencia y el análisis de riesgos, y que pueda:

reducir los riesgos crónicos y agudos que puedan dar lugar a que los alimentos sean nocivos para los consumidores (es decir, mejorar la inocuidad de los alimentos);

reducir los atributos negativos de los alimentos, como estado de descomposición, contaminación con suciedad, decoloración, etc., y mejorar los atributos positivos, como origen, color, aroma o textura, que aumentan su valor para los consumidores (es decir, mejorar la calidad de los alimentos), y

garantizar a los consumidores nacionales y a los países importadores que los alimentos son inocuos y responden a sus expectativas.

Elementos Básicos de un SCA

Legislación y reglamentos alimentarios

Gestión del control de los alimentos

Servicios de inspección

Servicios de laboratorio: seguimiento y datos epidemiológicos de los alimentos

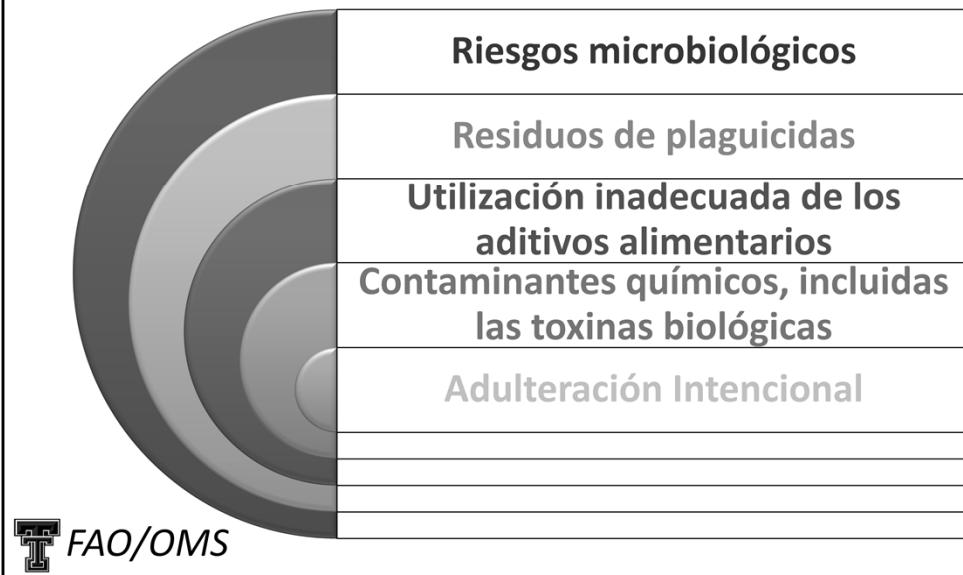

Información, educación, comunicación y capacitación

Esto sale de un documento de FAO
Paises basan sus sistemas en este documento

Sistemas de Control de los Alimentos

Preocupaciones de control principales:

Aspectos importantes en un SCA

FSMA se enfoca solamente en contaminantes microbiologicos y algo de adulteracion intencional. Pero no tiene que con pesticidas, toxinas ni aditivos quimicos
Brotes que hubo en estados unidos dio pie al FSMA

Gobierno de EEUU

List of Selected Multistate Foodborne Outbreak Investigations

When two or more people get the same illness from the same contaminated food or drink, the event is called a foodborne disease outbreak. The list on this page primarily represents multistate foodborne outbreak investigations since 2006 where CDC was the lead public health agency. For a complete listing of reported outbreaks please use the [Foodborne Outbreak Online Database \(FOOD\)](#) tool.

Public health officials [investigate outbreaks](#) to control them, so more people do not get sick, and to learn how to [prevent similar outbreaks](#) from happening in the future.

Foodborne Outbreak Tracking and Reporting

CDC captures national foodborne outbreak data from local and state public health departments then analyzes and makes it publicly available online.

Foodborne disease outbreak surveillance tracks and reports the foods, germs, and settings where outbreaks occur and increases our understanding of its impact on human health. This is the first step towards prevention. More...

Foodborne Illness Surveillance, Response, and Data Systems

Many surveillance systems are used in the United States to provide information about the occurrence of foodborne disease. Most of CDC's surveillance systems rely on data from state and local health agencies. Some focus on specific pathogens likely to be transmitted through food and have been used extensively for decades. More recently, new surveillance methods have emerged which improve the quality, quantity, and timeliness of data (e.g., sentinel surveillance systems and national laboratory networks).

Each surveillance system plays a role in detecting and preventing foodborne disease and outbreaks. CDC provides leadership for the following surveillance systems:

Foodborne Disease Active Surveillance Network (FoodNet)

Reports trends in foodborne infections and tracks the impact of food safety policies nationally

NEW! CDC's FOOD tool has been updated with 2012 outbreak data. Did you know you can search the data to find outbreaks by year, state, location, and pathogen?

Welcome to the Foodborne Outbreak Online Database (FOOD) tool. The FOOD tool is a web-based platform for searching CDC's Foodborne Disease Outbreak Surveillance System database. FOOD provides access to national information and is intended to be used for limited descriptive summaries of outbreak data. For a listing and more detailed information about select outbreaks where CDC was the lead public health agency, visit the [Selected Multistate Foodborne Outbreak Investigations](#) page.

Please see the [FOOD FAQ](#) and [Foodborne Outbreak Tracking and Reporting](#) web site for more information.

Disclaimer: This site was developed by the Centers for Disease Control and Prevention (CDC) to make Foodborne Disease Outbreak Surveillance System data more available to the public and stakeholders. CDC uses more detailed information for its analyses of the causes and risk factors of foodborne disease outbreaks.

Table is populated based on the following criteria: Years: All; States: All; Location of Consumption: All; Etiology (Genus Only): All;

Year	Month	State	Etiology	Location of Consumption	Total Ill	Total Hospitalization	Total Death	Food Vehicle	Contaminated Ingredient
Genus Species	Serotype or Genotype	Etiology Status							
1998 June	Washington	Private home	2					chicken, unspecified

GOBIERNO DE EEUU *BROTES* RECIENTES

GOBIERNO DE EEUU
CONTROL DE ALIMENTOS Y MEDICAMENTOS

The **Food and Drug Administration (FDA)** o
la **Administración de Alimentos y Medicamentos**
Agencia del Ministerio de Salud y Servicios Humanos
Responsable de proteger a los consumidores contra alimentos impuros, inseguros o etiquetados fraudulentamente.
FDA es responsable de la inocuidad de todos los alimentos, con la excepción de los productos que contengan más de 2% de componentes cárnicos o avícolas o alimentos que contengan huevos procesados (estos son jurisdicción del USDA-FSIS)

Gobierno de EEUU

Agencias y Responsabilidades

El FDA utiliza el ***Center for Food Safety and Applied Nutrition*** o **Centro para la Inocuidad de Alimentos y Nutrición Aplicada (CFSAN)** como agencia regulatoria y de inspección

Responsable de emitir regulaciones e inspecciones en:

- cGMP's (BPM's)
- Acta de Bioterrorismo (Defensa de Alimentos y Emergencias)
- Productos Enlatados Acidificados y de Baja Acidez
- Aditivos de Alimentos, Ingredientes y Empaques
- Etiquetado
- Mariscos y Pescados
- Inspección Residuos de Pesticidas en Alimentos Procesados
- HACCP para Jugos y Mariscos
- HACCP Voluntario para Lácteos
- **Registro de Alimentos Reportables (Reportable Food Registry)**
- **Ley FSMA 2011... 2015??**

CFSAN inspecciona pero no establece límites

Registro de Alimentos Reportables: cuando uno sospecha que un producto que está en proceso de exportación tiene algún problema

Gobierno de EEUU

Agencias y Responsabilidades

El FDA utiliza el ***Center for Veterinary Medicine***

o Centro para la Medicina Veterinaria

Como agencia que regula la manufactura y distribución de alimento, aditivos de alimentos y medicinas que se dan a los animales.

Incluye animales usados para el consumo humano y aditivos y medicinas para animales compañía o mascotas.

Responsable de emitir regulaciones e inspecciones en:

Balanceados

Alimento de mascotas

Drogas:

Hormonas

Antibióticos

CVM

FDA se encarga del alimento para animales drogas medicinas

Leyes:

Title 21, Chapter 9, United States Code

Partes 1 a 99: Regulaciones generales de la Ley FD&C
Acta de Empaque y Etiquetado Justo
Aditivos de color

Partes 100-169: Regulaciones generales de etiquetado
Estándares de alimentos
Buenas Prácticas de Manufactura Actualizadas
Alimentos
Agua embotellada
Enlatados de baja acidez
Alimentos acidificados
HACCP de Productos del mar (1996)

Partes 170-199: Regulaciones de aditivos alimentarios

Alimentos regulados por la FDA

Alimentos y aditivos alimenticios para personas y animales	Pescados y mariscos
Suplementos e ingredientes dietéticos	Productos lácteos y huevos
Leches maternizadas	Productos agrícolas de base crudos para utilizar como alimentos o como componentes de alimentos
Alimentos para animales domésticos	Alimentos enlatados
Bebidas (incluidas las bebidas alcohólicas y el agua embotellada)	Animales vivos para el consumo
Frutas y verduras	Productos de panadería, bocadillos y dulces

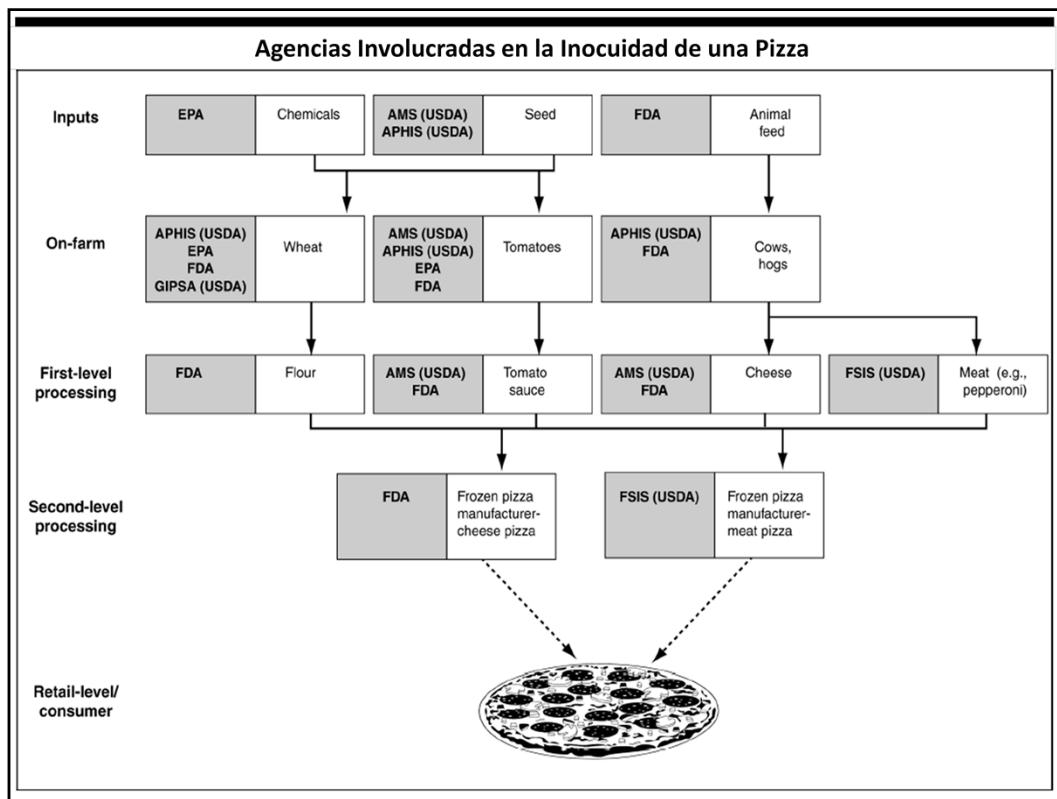

Requerimientos para Exportadores: Productos Agrícolas Frescos

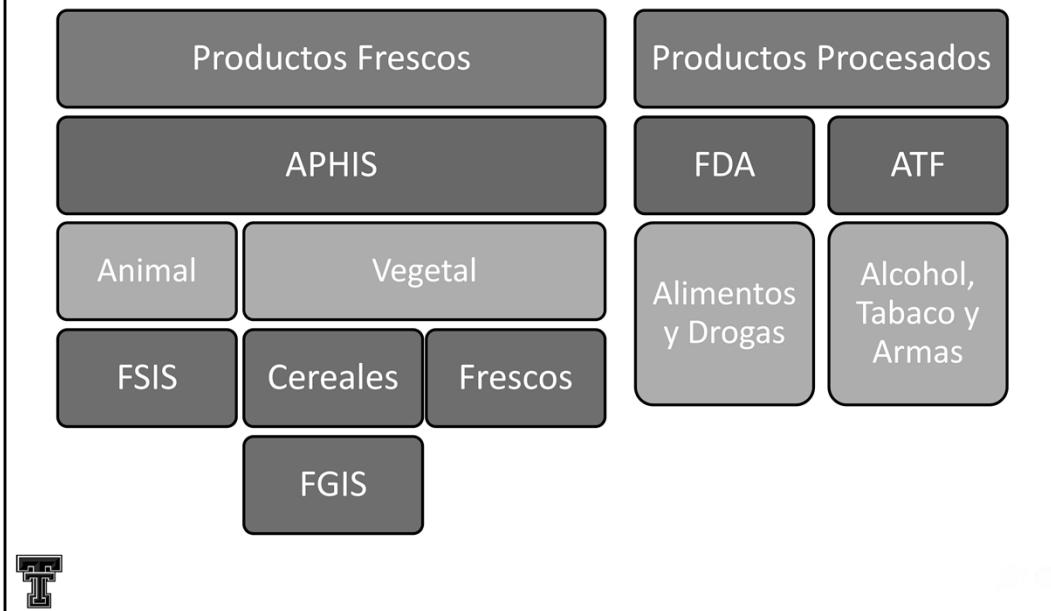

1. Registrarse FDA
2. Notificar FDA
3. Tratamiento maderas FDA
4. Admisibilidad es APHIS ... asegurarse de que el producto se puede exportar
5. Evaluacion de pesticidas
6. Conocer los pesticidas aprobados y los limites
7. Mercadeo es sobretodo comercial relacionado con produccion del ese producto en Estados Unidos, osea que no es conveniente para EU importar ese producto
8. Registrar la marca....

Requerimientos para Exportadores: Productos Procesados

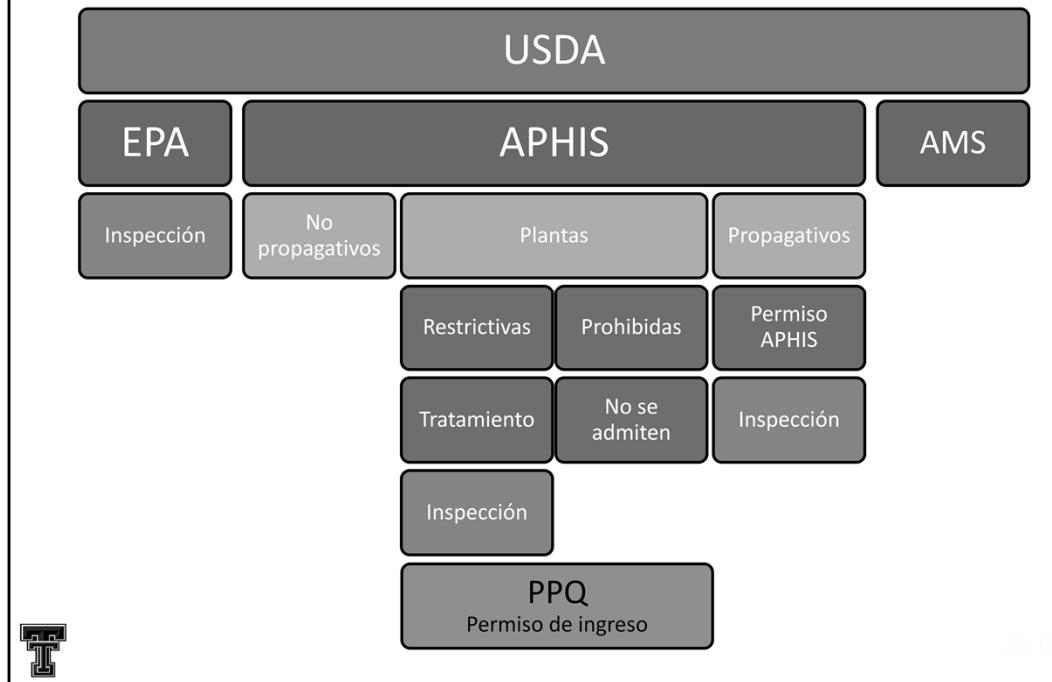

Ingreso de Productos a los EEUU

Ingreso de Productos Frescos a EEUU

Ley Federal

“Food Drug and Cosmetic Act”

Alimentos adulterados

402(a)(1) Si **contiene sustancias** que hagan que el alimento sea peligroso para la salud

402(a)(3) Si contiene sustancias sucias, podridas o descompuestas, no aptas para el consumo

402(a)(4) Si se ha preparado, empacado o mantenido en condiciones insalubres donde se puede contaminar y ser no apto para el consumo

Adulteracion intencional: por competencia desleal, por causar dano, por razones economicas

Rechazo de Importación

The screenshot shows the official website of the U.S. Food and Drug Administration (FDA). The header includes the FDA logo, the text "U.S. Food and Drug Administration Protecting and Promoting Your Health", and navigation links for Home, Food, Drugs, Medical Devices, Radiation-Emitting Products, Vaccines, Blood & Biologics, Animal & Veterinary, Cosmetics, and Tobacco Products. Below the header, a search bar and a link to "Most Popular Searches" are visible. Comisión del Codex Alimentarius

www.codexalimentarius.net

Food and Agriculture Organization FAO

World Health Organization WHO

1961-63. Creado para desarrollar estándares inter-gubernamentales

Conferencia 11th de la FAO. Resolución No. 12/61

WHA16.42 Programa Conjunto FAO/WHO de Estándares de Alimentos

174 Países + 1 Organización Miembro (CE, 27 países)

Comisión del Codex Alimentarius

Se reúne anualmente alternando entre Roma y Ginebra

Tarea:

Es el organismo de toma de decisiones del **Programa Conjunto de Estándares de Alimentos** de la FAO/OMS

Objetivos:

1. Proteger la salud de consumidores
2. Facilitar prácticas justas de comercio de alimentos
3. Coordinar el trabajo en todos los estándares

No es Mandatorio en su naturaleza

Los estándares Codex son al momento los referentes internacionales de armonización bajo los acuerdos MSF y de Barreras Técnicas al Comercio TBT de la OMC

El Rol de los Estándares del Codex

Se consideran el **referente (benchmark) internacional en inocuidad de alimentos**

Las **Regulaciones Nacionales** que sean **basadas o consistentes con los estándares del Codex cumplen los requerimientos del Acuerdo de MSF**

No necesitan ser justificados

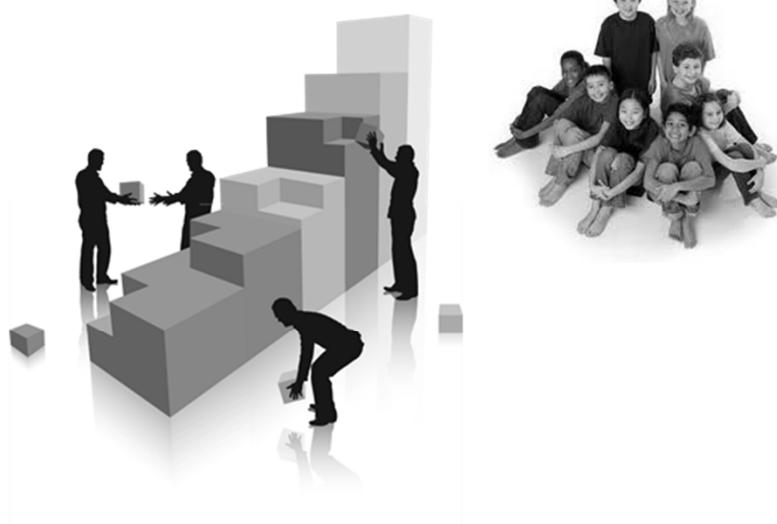

No son obligatorios, pero son la referencia en casos en que existan disputas comerciales

Si los estándares **son más exigentes** que los del Codex, se **DEBE tener una justificación científica**

Basada en un estudio de Análisis de Riesgos

Gracias
